Lock-out Drug List
Effective April 1, 2025

COUPE

Below is a list of medicines by drug category that are locked out from coverage under your prescription drug benefit. This means that they are not covered under your prescription drug benefit. In most cases, if you fill a prescription for any of the drugs that are locked out from the pharmacy benefit, you will pay the full retail price.

This list will be reviewed annually and is subject to change at any time. This is not intended as a complete list of all drugs subject to lock-out. Individual benefits will vary. Formulary alternative drugs are available from other pharmaceutical manufacturers for the drugs included in the pharmaceutical manufacturer lock-out list.

Please refer to your specific coverage. Coverage information may be included in a Benefit Booklet, Certificate of Coverage, Contract, Member Handbook or prescription drug endorsement. Or, call the number on the back of your member ID card if you have questions about your coverage.

Take action to avoid paying full price. If you are currently using one of the excluded medications, please ask your doctor to consider writing a new prescription for a covered alternative.

Generic drugs are shown in lower-case **boldface** type.
Brand prescription drugs are shown in CAPITAL letters.

+Authorized Generics – the term “authorized generic” drug is most commonly used to describe an approved, brand name drug that is marketed as a generic product without the brand name on its label. Other than the fact that it does not have the brand name on its label, it is the exact same drug product as the branded product and will process as a brand not generic.

*The NDC, or National Drug Code, is a unique 11-digit, 3-segment number. It is a universal product identifier for human drugs in the United States. The code is present on all nonprescription (OTC) and prescription medication packages and inserts in the United States. The 3 segments of the NDC identify the labeler, the product, and the commercial package size. The first set of numbers in the NDC identifies the labeler (manufacturer, repackager, or distributor). The second set of numbers is the product code, which identifies the specific strength, dosage form (i.e., capsule, tablet, liquid) and formulation of a drug for a specific manufacturer. Finally, the third set is the package code, which identifies package sizes and types. The labeler code is assigned by the FDA, while the product and package code are assigned by the labeler.
